PROFESSIONAL SUMMARY

Computer Engineering undergraduate (University of Ruhuna) and Software Engineer Intern at AgentRuntime Labs, building Model Context Protocol (MCP) servers and connectors that integrate AI clients with production platform services. Hands-on experience across backend development, REST API design, CI/CD automation and containerized deployments using Go, TypeScript, Python, Java, Node.js and React. Delivered 4 full-stack projects, including an industrial equipment monitoring system for a live client. Currently building depth in Microsoft Azure, cloud-native architecture and machine learning.

TECHNICAL SKILLS

Languages: Go, TypeScript, JavaScript, Python, Java
Backend & APIs: Node.js, Spring Boot, Microservices, REST APIs, Model Context Protocol (MCP), WebSockets (Socket.IO)
Frontend: React.js, Tailwind CSS, DaisyUI
Databases: PostgreSQL, MongoDB
DevOps & Cloud: Docker, Jenkins, Terraform, CI/CD Pipelines, Git, GitHub Webhooks, Oracle Cloud Infrastructure (OCI), Microsoft Azure
Tools: VS Code, Cursor, GitHub, Jira, Figma, WSL

PROFESSIONAL EXPERIENCE

Software Engineer Intern | AgentRuntime Labs | Jun 2026 – Present

- Develop MCP servers and connectors that expose AgentRuntime workflows, runs, vault services and platform tools to AI clients, enabling external agents to orchestrate platform operations securely.
- Delivered and supported MCP integrations for 3 AI client platforms (Cursor, Claude / Claude Code, ChatGPT), covering local configuration, remote HTTPS access, PAT bearer-token authentication and tool discovery.
- Engineered and validated SDK components in 3 languages (Go, TypeScript, Python), verifying runtime headers, connector routing, JSON schemas and client–server communication.
- Diagnosed and resolved authentication, handshake, schema, connection and tool-call failures across client integrations.
- Authored setup guides, test checklists and handover documentation that shortened onboarding for new users and team members.

PROJECTS

Equipment Data Analysis System (EDAS) | Client: KSPA Paper Mill | Jun 2025 – Present
React.js, Spring Boot, MongoDB, Docker, Jenkins, Tailwind CSS

- Building an industrial equipment monitoring and analytics platform that digitizes and centralizes daily operational data from multiple production machines.
- Implementing real-time monitoring dashboards and analytics to support maintenance planning and operational decision-making.
- Containerized services with Docker and automated builds with Jenkins.
- Designing the data foundation for planned AI/ML predictive-maintenance and early fault-detection models.

HR Management System | Academic group project for a real client | Sep 2025 | GitHub
React.js, Spring Boot Microservices, PostgreSQL, Tailwind CSS

- Developed a role-based HRMS with role-based access control for 3 user roles (Admin, HR Manager, Employee).
- Built 4 core modules: recruitment with CV filtering, attendance tracking, leave management and employee self-service.
- Applied a microservices architecture to streamline HR workflows for the client.

University Canteen System | Dec 2025 | GitHub
React.js, Node.js, MongoDB, Docker, Terraform, Jenkins, Git, Webhooks, Oracle Cloud

- Built and deployed a full-stack canteen management application with a DevOps-first approach.
- Automated build, integration and deployment with a Jenkins CI/CD pipeline triggered by GitHub webhooks.
- Provisioned cloud infrastructure as code with Terraform and deployed Docker containers to Oracle Cloud.

Real-Time Chat Application | Jun 2025 | GitHub
React.js, Node.js, MongoDB, Socket.IO, Tailwind CSS, DaisyUI, Cloudinary API

- Developed a full-stack messaging app with instant delivery over WebSockets (Socket.IO), with no page refresh.
- Designed REST APIs for users, messages and data operations.
- Integrated the Cloudinary API for image sharing alongside text messaging.

EDUCATION

BSc in Computer Engineering (undergraduate) | University of Ruhuna, Sri Lanka | 2022 – Present

LANGUAGES

Sinhala (native), English (professional working proficiency)
